

# Individual Activity - Submit your project

Lynn Robert Carter, PhD

2019-02-26

## Activity Kind

Individual activity

## Purpose

The purpose of this activity is to properly submit your work.

## Pre-requisite

Students are expected to have finished the creation of their project and the supporting screencast.

## Tasking

Verify that the project is named properly. If it is not named properly, use Refactor / Rename to give it a proper name.

Use the Export facility of Eclipse (using the Archive File option under General) and save the result to a convenient place for you to submit it.

Create a properly named folder and place the properly-named Eclipse archive, screencast, and all external documentation (e.g. UML diagrams, requirements specifications) into it. Use zip to create an archive of this folder and submit that archive. (Do not rename the archive after you have created it! Make sure the name is correct before you make an archive.)

Do your submission early. Since the screencast files can be large and there are a number of students in the class, if you wait until the last minute, the server can be stressed and what should go quickly can end up taking a long time.

## Deliverable

Like everything else, log what you have done and when you did it in your ENB.

## Submission

Each student must produce and submit the ENB submission prior to midnight.
