

# **Individual Activity - Produce an outline and activity script for this week's screencast**

Lynn Robert Carter, PhD

2018-02-27

## **Activity Kind**

Individual activity

## **Purpose**

The purpose of this activity is to further design and plan what needs to be done to produce a compelling screencast.

## **Pre-requisite**

Students are expected to have completed the Small Group Activity - Establish prioritized list of items to present in this week's screencast.

## **Tasking**

From the most recent task, you should have a good idea about what you want to demonstrate and the high-level flow of the demonstration. Now it is time to think very specifically about what you are trying to demonstrate and what precisely you need to do to the calculator in order to accomplish that.

As you produce your list, it is a good idea to actually run the calculator and jot down the ideas as you play with the calculator until your vision for the flow is clear for each item. (This is an activity script: what numbers need to go where, what buttons are pushed, what aspects of the display change, etc.) Capture that vision in your ENB and then the list of specific input actions, button clicks, and so forth that are needed until your script is done. Again, keep adding notes to your ENB as you proceed.

Once you have produce a complete list, do a dry run by yourself to convince yourself that the flow makes sense. When it doesn't, refine it.

Review the script with the submission rubric to ensure you have not missed anything.

Save your results and make sure your ENB is current!

## **Deliverable**

Students are responsible for producing and posting their notes in their ENB as evidence that they performed this task as required.

## **Submission**

Each student must produce and submit your ENB for the day.
