

# Individual Activity - Work to finish your project

Lynn Robert Carter, PhD

2018-02-27

## Activity Kind

Individual activity

## Purpose

The purpose of this activity is to finish the deliverables for the project leveraging all the feedback, experiences, and insights you have gained.

## Pre-requisite

Students are expected to have completed most of the calculator and have performed the following:

- Peer Review - The double calculator with error terms.
- Group Discussion - Issues, risks, and potential solution ideas.
- Individual Activity - Work on your project (both the code and the screencast).

## Tasking

Leverage the insights you have gained and update the code, the documentation, and whatever else is required (including the screencast) to produce the high-quality deliverable you know you can produce.

As you produce these deliverables, you are likely to see or think about things that should or need to be changed. Capture those in your ENB so you do not forget about them.

## Deliverable

Students are responsible for capturing their accomplishments, insights, doubts, problems, and concerns in the ENB.

## Submission

Each student must produce and submit the ENB submission prior to midnight.
