

Small Group Exercise: What tasks in software development are supported by screencasting?

Lynn Robert Carter, PhD

2019-02-14

Activity Kind

Small group exercise

Purpose

The purpose of this exercise is to explore the benefits and processes of screencasting.

Pre-requisite

Students are expected to have skimmed: Screencasting by Laura MacLeod

Tasking

Students are partitioned in to groups of two to four students. Collaboratively, the students suggest various kinds of tasks screencasting supports and why they are important. If they disagree, they discuss their differing opinions until they come to agreement or they agree that they can't. While this is taking place, members are recording notes into their ENB.

The process continues until they run out of time or they run out of ideas.

Deliverable

Each student is responsible for producing a set of notes for this exercise. Do not just provide the notes the group produced if you do not believe it is correct.

Submission

Each student must produce and submit the following answer page prior to the start of the next activity or exercise.
