

Small Group Activity - Discuss the implementation surfacing issues and insights

Lynn Robert Carter, PhD

2019-02-27

Activity Kind

Small group activity

Purpose

The purpose of this activity is to leverage the experiences of the rest of your group to surface ideas on how one might better address challenging things.

Pre-requisite

Students are expected to have participated in:

- Small Group Activity - Refine the design for processing values with units
- Individual Activity - Implement the design for processing values with proper units

Tasking

As a group, brainstorm a list of challenges you are facing trying to implement your code so that it flows gracefully from requirements through design to the code. Getting it to just work is **not** good enough. Jot down the items in your ENB and make notes of potential concepts for addressing them that are most interesting.

Use multi-voting to prioritize the list and discuss the issues and ideas for addressing the high priority items. Take notes or you will forget the details of the earlier items as you discuss the later, lower priority items. That would be very sad.

Deliverable

Students are responsible for producing and posting their notes in their ENB as evidence that they performed this task as required.

Submission

Each student must produce and submit your ENB for the day.
