

# **Individual Activity: Produce and Submit an Engineering Notebook (ENB) Entry for today's work**

Lynn Robert Carter, PhD

2019-02-10

## **Activity Kind**

This is an individual activity.

## **Purpose**

Keeping and maintaining effective engineering notebooks for your professional work will bring significant return to you over your career. This activity is performed while you are doing the work, each and every day you perform work on the project.

## **Prerequisite**

You are expected to have carefully watched the video: Engineering Notebook (ENB) – A powerful tool for inventors and professionals before you finalize and submit today's engineering notebook entry. You should also student the related grading rubric and peer review form for this activity.

## **Tasking**

The task today is the same as it was yesterday. The original note taking should take place while you are doing the work. Do not put that note taking off, especially not to the evening time, by which most of the details will have been lost. That said, it is okay to leverage new insight that may have just come to you about the work performed on today's activities. Add addition notes with new insights in order to try to produce a more effective ENB, but do not put of the initial note taking to the evening!

## **Deliverables**

The ENB submission must be made before midnight.

## **Submission**

Each student must submit an ENB entry for each and every day work is performed on the projects. Lack of an entry in the ENB logically means that no work for that activity was done during that day.
