Small Group Activity - Implementing the SelectList Exercise for four items

Lynn Robert Carter, PhD

2019-02-17

Activity Kind

Small group exercise

Purpose

The purpose of this exercise is to further understand the relations between design and implementation.

Pre-requisite

Students are expected to have:

- watched the video – Dynamic Select Lists.
- participated in the Small Group Activity – Dynamic Select Lists.
- Participated in the Small Group Exercise - What code from the sample implements the SelectList for three items

Tasking

Given the information in your ENB, work as a group to produce a working demo of the project so it deals with four distinct previous selections as opposed to just three. Be sure to take notes in your ENB as you will be required to implement this same code individually and enhance the documentation.

While your ground is doing this work, the mentors will be walking around and ensuring that you are properly adding notes into your ENB.

At the end of the session, regardless of how much has been accomplished, the person with the project on his/her machine will archive it and share it with the rest of the members of the team.

Deliverable

Each student is responsible for taking adequate notes to under and submitting it via their ENB.

Submission

All students must record their notes into their ENB prior to the start of the next activity or exercise.
